

4.2.2 Basic properties of solar high-latitude magnetic field structures

4.2.2.1 What is the intensity-field strength relation of polar magnetic field structures and how does it change with the activity cycle?

4.2.2.2 What is the emergence rate and lifetime of polar magnetic field structures and how do they change with the activity cycle?

4.2.2.3 Are there differences between the network at polar and at low latitudes?
